

Ultra Protector-N

NANO- SEALING

Easy and time-effective surface sealing

For all painted surfaces

Characteristics:

Protector Ultra-N is a micro emulsion. The emulsion in nanometer particle size creates on the paint surface/ rims a dirt-resistant sealing over a longer period and generates an excellent and outstanding gloss effect.

Application:

Prerequisite for an optimized sealing is a thorough cleaning pre-treatment, i.e. the surface should be free of any dirt, impurities and solvents.

To achieve best results Ultra Protector-N is sprayed on the freshly washed and still wet surface. After completing the spraying process use a wet rag and distribute the material across the surface.

After completing dry the surface with a clean, soft cloth.

Consumption per m² about 30ml

Durability:

Ultra Protection-N is only used pure w/o adding any other additives.

The effect greatly depends on the amount of material used.

Under normal mileage conditions:

Paint surfaces approximately 12 months

Wheels about 6 months

Notes:

- Flammable
- May irritate eyes and skin
- After contact with skin, rinse thoroughly with water and as precaution consult a doctor
- We recommend for suitable safety reasons to use gloves and safety goggles
- Vapors may cause drowsiness and dizziness
